

Homey

Athom

Everything connected, simply controlled

Homey combines all your wireless and smart devices at home into a single, easy-to-use and smart system.

Control your entire home with the free app for Android and iPhone. Make all your devices work together in harmony, regardless of brand or technology – Homey supports 50.000+ devices from over a thousand different brands.

Your entire home in your pocket

With the free Homey smartphone app, you're always a little bit at home. Receive notifications from sensors or doorbells, and control lights, locks, alarm systems and thermostats – wherever you are.

But there's more. The renewed Homey smartphone app allows you to easily manage, control and automate everything at home. Setting up devices, creating scenes or inviting new users: everything can be done from the palm of your hand, anywhere in the world.

Your home, your rules

Make your lights dim when you watch TV. Play your favorite music when you disarm your alarm on getting home. Shut down your home when getting to bed. Make the hallway light turn on when your doorbell rings – let your creativity run free!

Combining and linking devices becomes child's play with Homey Flow. Create Flows that combine your devices, internet services and music playlists. All through the intuitive Homey app, right on your smartphone.

Endless possibilities and freedom

Homey features 7 different wireless technologies: Zigbee, Z-Wave, WiFi, Bluetooth, Infrared, 433MHz and 868MHz. Homey talks with thousands of devices and services – and more are added on a daily

basis through Homey's open platform. Because Homey works with so many different wireless devices, you are never locked in to a single system or brand. This gives you the freedom to always select the device you want – now, and in the future. Through Homey Apps, new devices are integrated with unparalleled speed. Bring your home to life with the endless possibilities of Homey!

Control it your way

Control your home in the way YOU want. Homey has a free Smartphone App for iOS and Android, allowing touch control from anywhere in the world.

You can also talk with Homey. Homey features support for both Amazon Alexa and Google Assistant to directly control your entire home – including devices that can't do this on their own. Sometimes, however, having a real button is the best. Homey supports wireless buttons and remote controls, and allows you to use them for anything: install an 'everything off' button right next to your front door, or use a keyfob or remote to change the ambiance, and change light, music and temperature easily. Powered by Homey Flow, any button can perform any combination of actions!
